NADMIZ dehydrogenase (ubiquinone) (EC 1.6.5.3) chain 4L - pig mitochondrion C.Species: mitochondrion Sus scrofa domestica (domestic pig)
C.Species: mitochondrion Sus scrofa domestica (domestic pig)
C.Spate: 16-101-1999 #sequence_revision 16-Jul-1999 #text_change 03-Jun-2002
C.Accession: T10980; T11878
R.Jin, C.S.; Liu, C.Y.; Sun, Y.L.; Chang, L.C.; Cheng, I.C.; Yang, P.C.; Mao, S.J.T.; Hu& Submitted to the RMEL Data Library, November 1997
A.Bescription: Complete nucleotide sequence of the porcine mitochondrial genome.
A.Reference number: Z17237
A.Accession: T10980
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A/Cross-references: GB:J01394; NID:g336430; PIDN:AAB59276.1; PID:g336439; EMBL:V00654; N C/Cross-references: GB:J01394; NID:g336430; PIDN:AAB59276.1; PID:g336439; EMBL:V00654; N C/Genetics: A;Genome: mitochondrion A;Genome: mitochondrion C/Genome: mitochondrion C/Genome: mitochondrion; NAD; oxidative phosphorylation; C;Keywords: membrane-associated complex; mitochondrion; NAD; oxidative phosphorylation;

submitted to the EMBL Data Library, October 1995
A, Description: The sequence of C. elegans cosmid T23F2.
A, Reference number: Z18608
A, Reference number: L18630
A, Status: preliminary; translated from GB/EMBL/DDBJ
A, Molecule type: DNA
A, Residues: 1-57 < VDUZ>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       67.7%; Score 21; DB 2; I

C; Species Pyrococcus abyssi
C; Species Pyrococcus abyssi
C; Species Pyrococcus abyssi
C; Species Pyrococcus abyssi
C; Accession: B75106
R; Anonormous, Genoscope
Submitted to the EMBL Data Library, July 1999
A; Description: Pyrococcus abyssi genome sequence: insights into archaeal chromosome struth Reservance number: A75001
A; Recent and P75106
A; Status: preliminary
A; Molecule type: DNA
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-75 < KAW
A; Residues: 1-75 < KAW
A; Residues: 1-75 < WAW
A; Resperimental source: strain Orsay
C; Genetics:
C; Superimental source: strain Orsay

C;Comment: The complex of six MCM proteins is one of several proteins that must be bound
Ephosphorylated and dissociate from the chromatin.
C;Complex: The predominant form is a heterohexamer of MCM2, MCM3, MCM5, MCM6, and C;Function:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Description: part of the replication licensing system that permits DNA replication to C;Superfamily: human replication licensing factor MCM3; MCM homology C;Keywords: cell cycle control; DNA replication initiation; nucleus; phosphoprotein P;1-78/Domain: MCM homology (fragment) <MCM>

US-09-900-147-5

Sequence 5. Application US/09900147

Patent No. US20020103121A1

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: Bandara, Lesantha R

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE REFERENCE: 620-67

CURRENT PILING DATE: 2001-07-09

PRIOR PILING DATE: EARLIER PILING DATE: 1999-05-27

PRIOR PILING DATE: EARLIER FILING DATE: 1999-05-27

PRIOR PILING DATE: EARLIER FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 5

LENGTH: 16
                           PAPPLICANT: La Thangue, Nicholas B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 15, Application US/09900147

Sequence 15, Application US/09900147

Patent No. US20020103121A1

GENERAL INFORMATION:

PAPLICANT: La Thangue, Nicholas B

PPLICANT: Bandara, Lasantha R

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

PILE REPERBNCE: 200-67

CURRENT FILING DATE: 2001-07-09

PRIOR PILING DATE: EARLIER FILING DATE: 1999-05-27

PRIOR PILING DATE: EARLIER FILING DATE: 1999-05-27

PRIOR FILING DATE: EARLIER FILING DATE: 1996-12-20

NUMBER OF SEQ ID NOS: 18

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 15

LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 89, Application US/09852659A

Patent No. US20020077287A1

GENERAL INFORMATION:

JAPPLICANT: Rosen et al.

TITLE OF INVENTION: 28 Human Secreted Proteins

FILE REFERENCE: PS703P4

CURRENT APPLICATION NUMBER: US/09/852,659A

CURRENT PILING DATE: 2001-05-11

PRIOR APPLICATION NUMBER: 06/265,583

PRIOR FILING DATE: 1998-09-11

PRIOR FILING DATE: 1998-09-11

PRIOR FILING DATE: 1998-09-11

PRIOR FILING DATE: 1998-09-12

PRIOR APPLICATION NUMBER: 60/040,762

PRIOR PILING DATE: 1997-03-14

PRIOR FILING DATE: 1997-03-14

PRIOR FILING DATE: 1997-03-14

PRIOR FILING DATE: 1997-03-14

PRIOR FILING DATE: 1997-05-30

PRIOR FILING DATE: 1997-05-30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2; Mismatches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 16, Application US/09308935

Patent No. 6268334.

GENERAL INFORMATION:

APPLICANT: La Thangue, Nicholas B

APPLICANT: La Thangue, Nicholas B

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

TITLE OF INVENTION: Peptide antagonists of DP transcription factors

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-308-935-1
US-09-308-935-1
Sequence 1, Application US/09308935
Patent No. 626834
GENERAL INFORMATION:
APPLICANT: La Thangue, Nicholas B
APPLICANT: La Thangue, Nicholas B
TITLE OF INVENTION: Peptide antagonists of DP transcription factors
FILE REFERENCE: 620-67
CURRENT APPLICATION NUMBER: US/09/308,935
CURRENT PILING DATE: 1999-05-27
EARLIER PILING DATE: 1997-12-22
EARLIER PILING DATE: 1997-12-22
MUMBER OF SEQ ID NOS: 18
SOFTWARE: PatentIn Ver. 2.1

Patent No. 5792634
GENERAL INFORMATION:
APPLICANT: Conaway, Ronald C.
APPLICANT: Conaway, Joan W.
APPLICANT: Bradsher, John N.
TITLE OF INVENTION: RNA POlymerase Transcription Factor NUMBER OF SEQUENCES: 37
CORRESPONDENCE ADDRESS:
ADDRESSEE: RICHARDS, MEDLOCK & ANDREWS
STREET: 1201 Elm Street, Suite 4500
                                                                                                                                                                                                                                                        Sequence 75, Application US/08725459B
Patent No. 6084068
GENERAL INFORMATION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

) V.

 $\frac{1}{2} \int_{\mathbb{R}^{n}} dx = \frac{1}{2} \int_{\mathbb{R}^{n}} dx = \frac{1}{2}$

 ô
 diphosphate + L-asparaginyl-tRNA(Asn).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-II aminoacyl-tRNA synthetase family.
